III. WRITING (10 POINTS) DO TASKS 1 AND 2

TASK 1: (4 pts) Complete the following paragraph.

Using surveillance cameras at school has many benefits. Firstly, it is regulating the system between students and helping teachers to perform their duties to the fullest. Secondly, it is dealing with violations during school hours that are issued by students when they are in the school grounds during recess. Finally, surveillance cameras help to recover data upon request in the event of theft cases or misbehaving at school. That is why surveillance cameras are an essential thing that must be inside every school in order to avoid most internet problems.

in order... to, achieve a greater education and benefit for students.

TASK 2: (6 pts)

Nowadays, people think that living in big cities is very challenging.

Write an article to be published in your school e-magazine about the problems people face in big cities.

Living in the city has several drawbacks due to the population density, routine work and other things that make life in the city somewhat tiring. Here are some of the difficulties of living in the big city. Firstly, the most significant issue is the high prices, where the high cost of living is considered one of the most important negatives and obstacles to living in the city and the first thing that comes to the minds of individuals when they decide to move from the countryside to the big city. Civil life is full of people which causes a lot of noise resulting from the movement of people, cars, trains, planes, and other things. Most people live in the big city in very small and narrow apartments, so that it is rare to have a patio or an outside garden for the house. In addition, the civil way of life is characterized by the confinement of individuals in their own four walls for the most part and the loss of the space of social relations that bind them with friends and neighbors due to their preoccupation with other activities most of the time. Finally, the overcrowding in the city and the number of transport vehicles, factories, etc. and the decline of vegetation leads to air pollution with harmful gases, in addition to the pollution of water and various types of waste.
